

KREDL rushing to meet target

Deccan Chronicle
Mangaluru: The Karnataka Renewable Energy Development Limited (KREDL) is striving to meet the target of producing 1,000 MW of solar power, in line with the national target of 1,000 GW by 2022 under the national solar mission, a top official has said. The agency had invited tenders for power production and would rope in producers periodically. KREDL Assistant General Manager (Off-Grid) Vidyia Rani said at a seminar on 'renewable energy-solar top power plants'. The agency had so far commissioned units producing 124 MW solar power and initial work for setting up more units had been completed. The Union government had specified various sectors from which the 100 GW solar power could be generated including solar parks, state government undertakings and solar rooftops. The Centre wanted to ensure that the solar power feeding to the grid should go up from the present 0.25 per cent to at least 3 per cent by 2022, she said. Rani said KREDL was hopeful of executing the target in Karnataka through e-tendering as per the state government's revised solar policy for 2014-21. The cost of production of solar power had reduced substantially with advanced technology, she said, adding that while Rs 15 crore was required to produce one MW solar power two years ago, it had come down to Rs 5-6 crore now. Every household should go for rooftop solar power as the quantum of subsidy had been increased from 15 per cent to 30 per cent of the project cost, she said. The total power generated from non-renewable sources in Karnataka now stood at 5044.3 MW. A solar power park is proposed to be set up in 11,000 acres of land at Pavagada taluk in Tumakuru district.

Kerala to Set up First Petcoke Power Plant

Our Bureau

Kochi: The Kerala government will set up the state's first petcoke (petroleum coke-based) power plant using the fuel produced from BPCCL Kochi Refinery's integrated refinery expansion project (IREP).

The IREP, which is expected to be completed by May 2016, will yield approximately 1.4 million tonnes of petcoke. This can be used to produce around 500-600 mw of power. Petcoke is a high calorific value solid fuel and is extensively used for power generation in various countries.

INKEL, Kerala's PPP model infrastructure development company, prepared the feasibility study of the project in March 2014. The project is bolstered by many favourable factors, including assured fuel supply from the BPCCL refinery with negligible transportation cost, adequate water source, pollution-free, eco-friendly, advanced technology, and excellent connectivity. "As such, this can be one of the best infrastructure projects initiated by the government," said T Balakrishnan, MD, INKEL.

Embassy Group to fund infra projects in City

Deccan Herald
BENGALURU: The Bengaluru Development Department is partnering with the Embassy Group, which is under the scanner for tax evasion, to carry out infrastructure projects in and around the IT Parks developed and being managed by the group.

Bengaluru Development Minister K J George on Friday said the Embassy Group had come forward to fund the proposed flyover project (between Nagavara and Hebbal), in front of Manyata Tech Park.

Addressing the reporters, George said that the Embassy Group had volunteered to fund the Rs 50-crore project.

The Group has also proposed to develop service roads in and around all of its tech parks in the City, carry out drain works inside and outside the parks, set up escalator skywalks, and construct sub-stations inside two tech parks to meet the power demand. All of these works are said to cost around Rs 450 crore.

George said the Group has set an example by coming forward to assist the government with infrastructure projects and hoped that other developers in the City would follow suit.

The tender process for the flyover project would be completed by the year end.

The minister also said he is a partner with Embassy Golf Links and that it has nothing to do with these works. The

Group will not be given ownership of any of the projects developed, he added.

Skywalks, sub-stations

When contacted, Embassy Group Chairman Jitendra Virwani said his company was trying to reach out to the government for the last two years to help with infrastructure and traffic projects. He said escalator skywalks would be set up in five places - opposite Manyata Tech Park, Embassy Golf Links, Embassy Tech Village, Cessna Business Park and Prestige Tech Park.

The Group has proposed to PFCCL to set up two sub-stations of 220 kv at a cost of Rs 130 crore each, within Manyata Tech Park and Embassy Tech Village. It has sought around four acres of land in this regard, he added.

Tax evasion

When asked about the Rs 83 crore dues that the Group is supposed to pay the BBMP, Virwani said the civic agency had suddenly increased the property tax from Rs 8 to Rs 10 per sq ft, and was insisting that his company pay the amount along with interest, retrospectively. "We are willing to pay the revised rates. But the BBMP cannot insist that we pay up the interest for the last ten years. The matter is before the court," he added.

Power production at Kudankulam to resume in Jan

Deccan Herald
CHENNAI, DHNS: Almost six months after electricity generation was suspended due to maintenance and supply of power to Tamil Nadu, Karnataka and other southern states, the first 1,000-MW unit at the Kudankulam Nuclear Power Project will resume in January 2016.

The unit-1 which was shut down on June 24 for 60 days for annual maintenance has broken several restart deadlines.

Atomic Energy Commission Chairman Sekhar Basu said the KNPP was giving final touches to unit-1. "The first unit of Kudankulam will be operational in January 2016," he said. Basu, who was on a visit to the unit on Friday, said work is also in full swing on the second unit which will start working by May.

Expressing concerns over the delay in commencing the operation of the first unit, the Tamil Nadu government had made several unsuccessful requests to the Centre.

When the unit-1 starts power generation to its full capacity, it supplies electricity to Tamil Nadu (562.50 MW), Karnataka (221 MW), Kerala (133 MW), Andhra Pradesh (50 MW) and Puducherry (33.50 MW).

The first unit of KKNPP is India's first pressurised water reactor belonging to the light water reactor category at a cost of more than Rs 17,000 crore.

"The transportation of spare parts were delayed. Therefore, it took more time to resume power generation in the first unit," a senior official from KNPP said. Work on the second unit is 90 per cent complete, he added.
